

# Transmission Error - Lost ERROR

I have not shown client and the server specifically since this kind of error can occur from ACK packets coming from the client side or the server side as well so to reduce redundancy I am using TFTP A and TFTP B just like the prof used them in her slides.

It could be that the Delayed error packet is received by TFTP B before the resent ERROR packet is received by TFTP B in that case the TFTP B side will terminate on the first ERROR packet it receives

For a duplicate Error packet the second ERROR packet is never received since the receiving side terminates instantly Hence we will not draw a separate diagram for that

→ void
