Time diagram for invalid packet header WRQ error to server

Client

Server

TID "x"

Port 69

WRQ 02 x --> 69

TID "y"

<<create>>

ACK 04 (blk# = 0 y --> x)

DATA 03 (blk # = 1 512 bytes x --> y)

ACK 04 (blk# = 1 y --> x)

ACK 04 (blk # = 2 512 x --> y)

ERROR 05 (errorcode 04 y --> x)

<<close>>
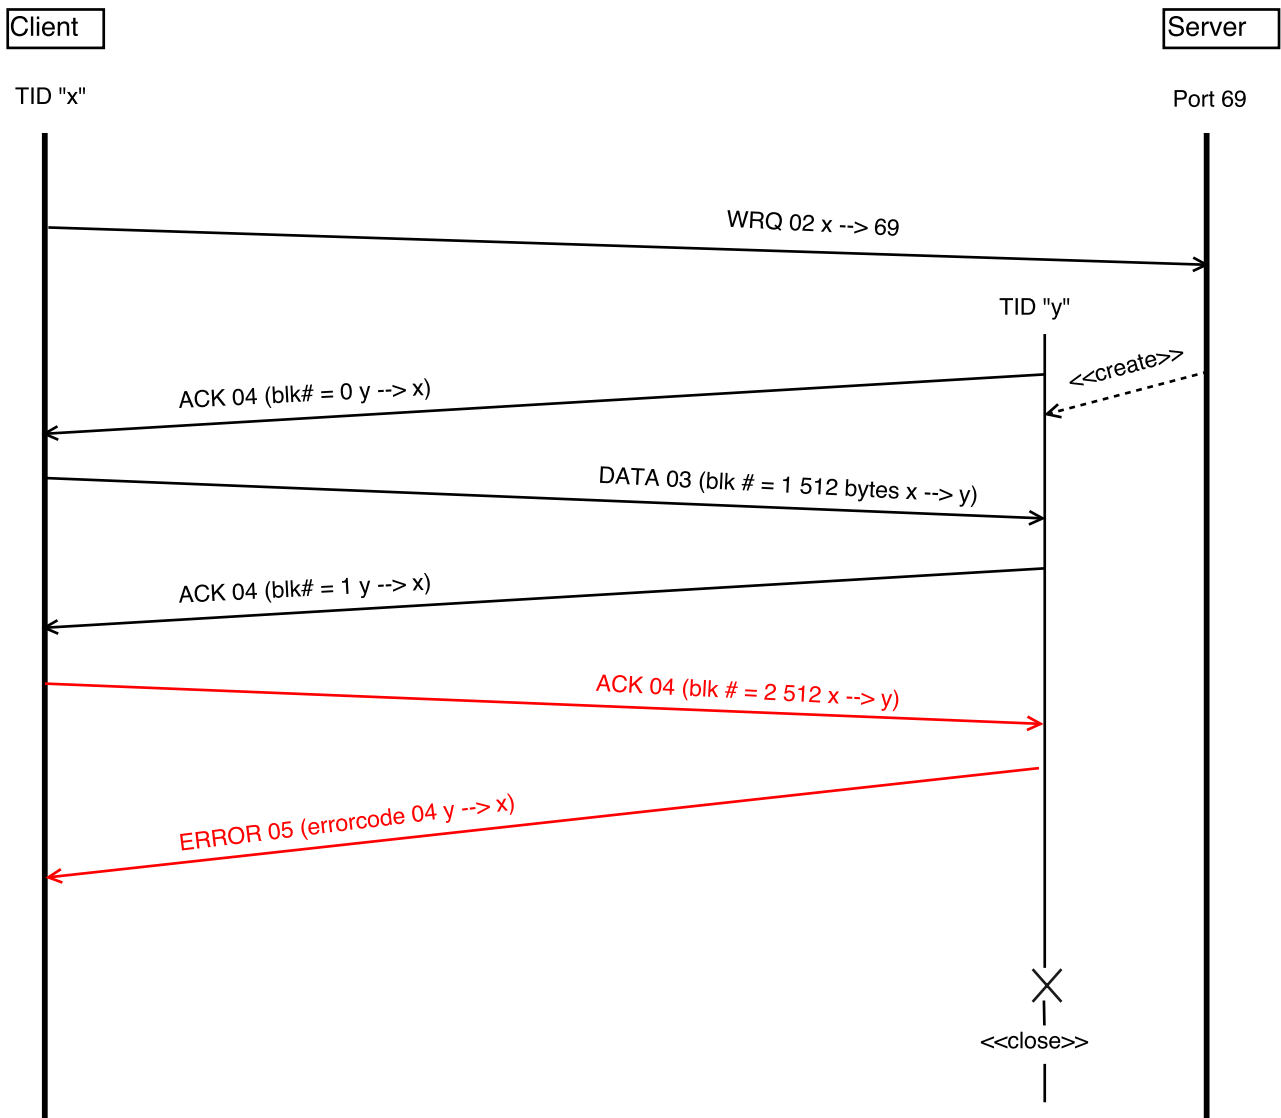

Invalid packet header error includes all the packet sent at the wrong time
In this timing diagram, an example is given as an DATA packet gets sent when server is expecting a DATA packet.
In the real program, the ACK packet could be replaced by any other kinds of packet excepts DATA packet.
